

USER STORY 1 (PARKING LOT OWNERS PERSPECTIVE)

Tan Tenekecioğlu is the owner of a parking lot in Gebze. According to Tan, most of the parking lot owners complain about money and not trusting their employees in this regard. Employee problems and theft problem are other issues Tan is considering. In addition, many customers who could not find the parking lot are the other subject of the problems. Tan also wants to save on labor and labor costs. The high number of employees is one of the factors in this situation. Tan has 3 employees named İlkan, Yılmaz and Ersoy. A very large part of the workforce of these 3 employees is to check that the car park is working without any errors. In addition, controlling and storing this system manually is among the problems expressed by the employees. Tan wants this whole system to be done automatically, quickly and reliably and thinks that he can solve his problems in this way.

USER STORY 2 (CAR OWNERS PERSPECTIVE)

Tuncay is a person who lives in Gebze and owns a car. Tuncay drives his car while going to school, meeting with friends and traveling in daily life. The biggest question mark in mind while doing these activities is the problem of finding a parking space. Tuncay is having trouble finding a parking space. In addition, many problems related to parking are among the problems of Tuncay. After finding the parking spot, whether there is an available space in the parking lot, payment when leaving the parking lot, etc. Tuncay is waiting for a solution for the issues. In addition, Tuncay thinks that it is not possible to find a reliable parking place these days. Tuncay wants an automatic, fast and reliable solution for all these.
